- Price level**

Description

This demo suitcase represents a practical remote tank monitoring application in a realistic way and makes it easy to understand. A schematic reproduction of the application is printed on the aluminum plates and makes a very professional impression. A perfect tool to obtain the maximum attention from your customer.

Content of the demo unit:

- Fluidwell F073 level display with large digits display and two alarm outputs, configured as high and low alarm. The F073 is supplied with the backlight option.
- Potentiometer as a simulation of a continuous level instrument (radar, TDR, ultrasonic, hydrostatic pressure).
- ProcessMonitor M422 remote monitoring unit with two 4 - 20mA and two digital inputs.
- USB GSM modem for the connection to your PC or laptop.
- Processview software to demonstrate the visual aspect of this application on your computer.

The only thing that you need is a SIM card from your local telecom provider.

Quick start demo

- Place the SIM card into the M422.
- Connect power cable.
- Press switch ON.
- The power supply is connected to the M422.
- The M422 feeds the "level" sensor and the F073 level display.
- The 4 - 20mA and both alarm values are connected to the M422.
- Default the alarm outputs are set at 20% (low level/re-order) and 80% (high level).
- Default: when the "level" reaches the alarm values the backlight switches over from green to flashing red.
- You can put the mobile number of you customer in the M422. When the alarm occurs your customer gets a clear SMS.
- Default the M422 will react on a power failure by sending an SMS.
- Default tagnumber is **tank G02**.
- Install the modem driver according to the suppliers' manual and plug the USB modem in your laptop.
- Install the Processview software on your laptop.
- Use photo and/or graphics to upgrade the visual aspect of your demo.

With the ProcessMonitor demo kit, you make a tank monitoring solution look very easy.
