Introduction

The F133 is a unique product as it is especially designed for a controlled delivery of undefined quantities. It offers all the functionality known from gas stations to fill-up your car. The unit incorporates special functions with delay times to start a pump first, control a valve and expect a flow within a certain period of time. Moreover, the flow rate and the allowed total dispensed quantity is monitored as well. If, for whatever reason, no pulses are coming in, the delivery will be terminated after a pre-defined time. Sub-deliveries are also catered for allowing you to fill up several compartments within one and the same delivery. A wide selection of options further enhances the capabilities of this model, which includes Intrinsic Safety and full Modbus communication.

Display

The display has large 17mm (0.67") and 8mm (0.31") digits which will zero after a startcommand and display "leading eight's". During the delivery, the actual dispensed quantity is displayed together with the actual flow rate and the status of the controller. Several resettable and non-resettable totalizers are available as well as a batch counter. All values are backed-up in EEPROM memory every minute.

Configuration

All configuration settings are accessed via a simple operator menu which can be password protected. Each setting is clearly indicated with an alphanumerical description, therefore avoiding confusing abbreviations and baffling codes. All settings are safely stored in EEPROM memory in the event of sudden power failure.

Control outputs

One output is available to control a pump after receiving a start-signal. After the start-up-time, a second output will be switched to control the valve to allow the product to be dispensed. The output signals can be passive NPN, active PNP or an isolated electro-mechanical relay.

Hazardous areas

This model is ATEX and IECEx certified as Intrinsically Safe for gas applications with an allowed ambient temperature of -40°C to +70°C (-40°F to +158°F) and dust applications with an allowed ambient temperature of -40°C to +50°C (-40°F to +122°F). A flame proof Ex d enclosure with ATEX/IECEx certification is also available.

Communication

All process data and settings can be read and modified manually or through the Modbus communication link (RS232 / RS485). After the delivery, the dispensed quantity and batch number is available to be used for ticket printing (B.O.L.). The F133 has the ability to be locked-out until this information has been read and initialized.

Overview application F133

The F-Series is your first and safest choice for field mount indicators in safe and hazardous area applications. Especially in harsh weather conditions like rain, snow, salty atmospheres and temperatures between -40°C up to +80°C (-40°F up to 176°F). For delivery purposes, small scale gas stations or on board of ships or trucks for customer deliveries. Suitable for filling-up multiple compartments within one delivery.

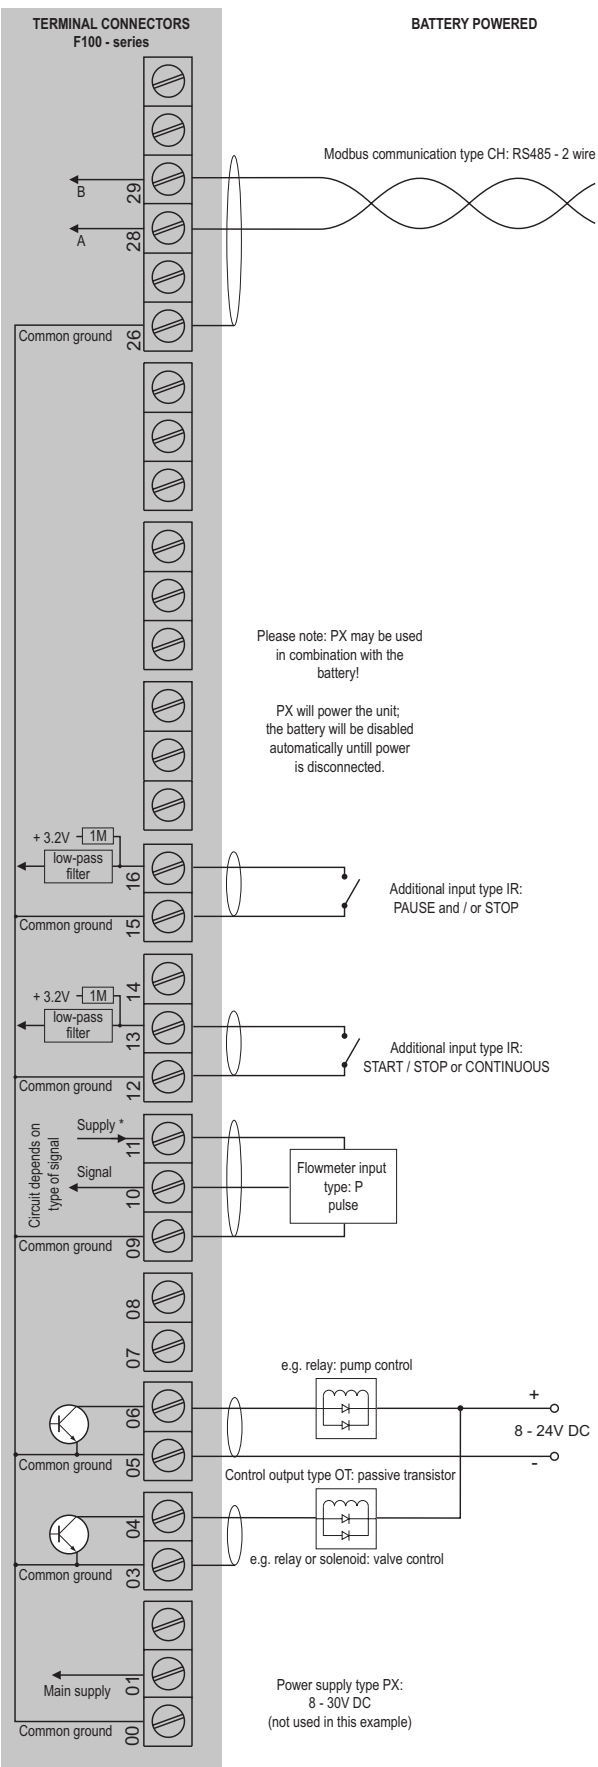

Signal input

The F133 will accept most pulse input signals for volumetric flow or mass flow measurement. The input signal type can be selected by the user in the configuration menu without having to adjust any sensitive mechanical dip-switches or jumpers. Further, two inputs are available to control the process remotely if desired.
